

THE STATE OF CLEAN ENERGY JOBS

American Manufacturing Battered and on Brink of Disaster from Trump's War on Clean Energy

UPDATED: April 30, 2025

In just two years, clean energy incentives sparked a historic surge in U.S. factory construction and created over [400,000 new jobs](#). Now, though, President Trump is moving quickly to dismantle key parts of the sector, which would crush this U.S. manufacturing renaissance, raise energy costs, and stifle American innovation with impacts reaching decades into the future.

The Trump administration's actions, from tariffs to executive orders clawing back clean energy loans, have created chaos and uncertainty for American businesses and workers. Across all clean energy companies, over 60,000 jobs have already been threatened or lost since Trump's election. Even companies that publicly announced new jobs following the clean energy investments of 2022 are now seeing growth reverse, with new job numbers falling from 406,000 at the end of last year to 399,000 by the end of the first quarter of 2025. In fact, it marked the first quarter since the summer of 2022 that clean energy job creation declined, ending two and a half years of consistent job growth. Already, the record level of factory construction investment driven by clean energy since 2022 has [turned down sharply](#) under Trump.

The manufacturing losses from these early actions will only grow, but the remaining 399,000 jobs are at even greater risk from congressional Republicans' legislative agenda, which could roll back clean energy tax credits entirely, enact a phased-out repeal, or otherwise sabotage implementation. Such efforts would lead to the greatest exodus of manufacturing jobs since the "China Shock" decades ago, with the future of manufacturing ceded to China yet again.

As demand for American energy continues to increase to power data centers, clean energy is increasingly critical to generate the energy abundance we need and avoid skyrocketing costs for homes and businesses. Clean energy is now the most affordable and fastest to get online, reflected in the fact that [93% of new electric-generating capacity](#) this year is projected to come from solar, wind, and batteries, according to Trump's own Energy Department. The following analysis outlines the state of clean energy jobs by sector, state, and congressional district, including rural and disadvantaged community breakdowns.

TABLE OF CONTENTS

Executive Summary: Trump's Early Impacts and 400,000 Clean Energy Jobs At Risk	1
By Sector	8
By State	8
In Republican Congressional Districts	38
In Disadvantaged Communities	44
In Rural Communities	50
Appendixes	56

EXECUTIVE SUMMARY

CLEAN ENERGY MANUFACTURING GROWTH ALREADY BUCKLING UNDER TRUMP'S EARLY ACTIONS

A Climate Power [analysis](#) found that since President Donald Trump was elected in November 2024, 62,554 clean energy jobs have been lost, delayed, or threatened as a result of his administration's actions, ranging from tariffs to executive orders explicitly targeting sectors such as wind energy manufacturing. **Over Trump's first 100 days in office, that amounts to an average of more than 600 jobs lost or jeopardized per day.**

Despite declaring a national emergency that America lacks a sufficient energy supply and proclaiming a goal of American "energy dominance," Trump's actions have slashed that supply and set back American competitiveness with China in essential energy industries.

The clean energy investments that have been canceled or stalled since Trump's election represent \$71.24 billion in new investment across the country, significantly reversing the factory construction and manufacturing boom over the last two and a half years. The job losses and delays span industries ranging from solar, wind, hydrogen, critical minerals, clean power generation, battery manufacturing, and more.

The analysis also found that Trump's energy agenda and Republicans' threats to repeal clean energy tax credits have led utility costs to surge nationwide. Over the same time period, utility companies in 17 states have hiked rates as much as [\\$40 per month](#). Experts [project](#) that if Republicans move forward with repealing clean energy provisions, households will see an increase in annual energy costs [more than \\$110](#) for American families starting next year.

10 STATES WITH THE MOST CLEAN ENERGY JOBS LOST OR THREATENED			
STATE	# OF PROJECTS	JOBS LOST OR THREATENED	INVESTMENTS LOST OR THREATENED
ARIZONA	5	10,635	\$3,610,000,000
NEW JERSEY	4	7,700	\$2,696,000,000
MASSACHUSETTS	3	6,590	\$200,000,000
NEW YORK	13	5,805	\$5,523,022,000
NEVADA	1	5,000	\$2,000,000,000
MICHIGAN	8	2,667	\$14,217,700,000
LOUISIANA	2	2,240	\$4,000,000,000
TEXAS	4	1,673	\$4,029,000,000
INDIANA	1	1,600	\$1,559,000,000
GEORGIA	2	1,528	\$3,270,600,000

NEARLY 400,000 NEW JOBS AT RISK

A MAJORITY IN REPUBLICAN DISTRICTS

For hundreds of communities in every corner of the country, new clean energy investments spurred by the 2022 tax incentives, especially in manufacturing, have been a lifeline for a brighter future from Wierton, West Virginia, to Pinal County, Arizona. Now, with those investments already facing headwinds from Trump’s tariffs and executive actions, that lifeline is in danger of being cut altogether.

This analysis documents the breadth of these private sector investments. Companies announced or advanced **777** new clean energy projects totaling 398,986 new jobs — down from **406,007 at the end of 2024** — and over **\$441 billion** in investments across **49** states and Puerto Rico between August 16, 2022, and March 31, 2025. In fact, Q1 of 2025 was the first quarter since before the summer of 2022 that net new clean energy jobs declined overall, after two and a half years of consistent job growth.

Total announcements have included **230** new battery manufacturing sites and **164** new or expanded electric vehicle manufacturing facilities, but both of these industries have already been hit hard by Trump's actions, with this analysis finding a decrease in the total number of projects since the last analysis. Indeed, separate data from Atlas Public Policy [show](#) more projects were canceled in the first quarter of 2025 than in the previous two years combined, including major manufacturing and mining projects.

A bulk of the new clean energy projects announced since August 2022 are located in congressional districts represented by Republican members of the U.S. House of Representatives — totaling **210,710** new jobs and over **\$199.89 billion** in investment across **417** clean energy projects in **152** Republican-held districts.

In disadvantaged communities, **344** new clean energy projects have been announced since the passage of the clean energy investments in 2022, bringing **\$122.8 billion** in investment and **155,183** jobs to disadvantaged communities across **41** states.

Across rural America, **138** new clean energy projects have been announced since the passage of the clean energy investments in 2022, bringing **\$56.63 billion** in investment and **64,943** jobs to rural communities across **32** states.

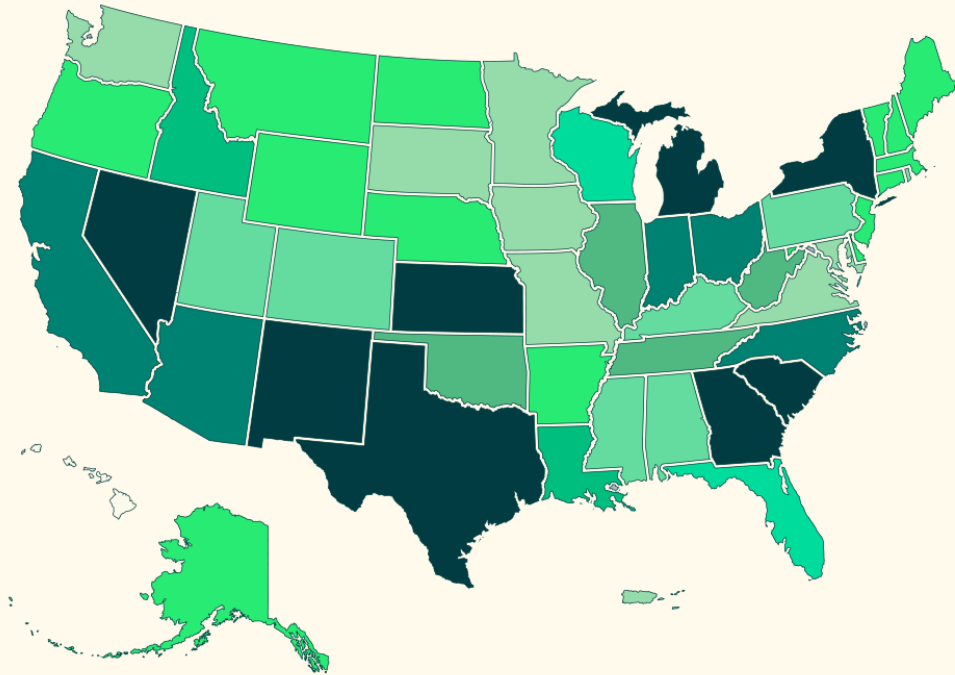

62,000 CLEAN ENERGY JOBS LOST OR THREATENED

SINCE TRUMP'S ELECTION

DATA: CLIMATE POWER

CLEAN ENERGY JOBS PER STATE UNDER THE CLEAN ENERGY PLAN

JOB PER STATE:	1-1,000	1,000-2,500	2,500-5,000	5,000-10,000	10,000-20,000	20,000+
----------------	---------	-------------	-------------	--------------	---------------	---------

These newly created jobs, now under threat across the country, represent good-paying opportunities for factory floor workers, electricians, mechanics, construction workers, technicians, support staff, and thousands of others. Clean energy jobs, many of them union jobs, [pay higher wages](#) and provide good benefits; research from the [Brookings Institution finds](#) that landing a clean energy job can result in an eight to 19 percent income increase. In fact, [75 percent of the new jobs](#) created from clean energy investments don't require four-year degrees, meaning they're accessible to all Americans.

New clean energy jobs have also been benefiting union workers. The clean energy investments include strong labor provisions and incentives to ensure these new clean energy jobs lead to careers that will truly sustain workers and their families. In November 2023, the [United Auto Workers \(UAW\)](#) [ratified a new agreement](#) with Ford, Stellantis, and General Motors that guaranteed future EVs would be made in America with union labor. The new agreement also allows [workers at new and planned EV battery manufacturing plants](#) to join the UAW's master agreement, ensuring workers across the EV supply chain receive good pay and benefits.

Unions outside of the auto industry are also benefiting from clean energy investments. In December 2023, the International Brotherhood of Electrical Workers (IBEW) signed a project labor agreement to build the SunZia transmission line across Arizona and New Mexico, an opportunity that IBEW President Kenneth Cooper said would “[create good, middle-class jobs throughout the region.](#)” The project labor agreement follows an October 2023 [national tri-trade solar agreement](#) between the IBEW, the Laborers International Union of North America, and the International Union of Operating Engineers, which makes it easier for developers, contractors, and unions to bring more solar power online.

399,000 CLEAN ENERGY JOBS AT RISK

BY SECTOR

DATA: CLIMATE POWER

NEW CLEAN ENERGY JOBS AT RISK BY SECTOR

JOBS BY SECTOR					
SECTOR	# OF PROJECTS	NEW JOBS	NEW INVESTMENTS	# OF PROJECTS LOST OR THREATENED	JOBS LOST OR THREATENED
BATTERIES	230	146,472	\$145,801,178,650	23	20,182
CLEAN TECHNOLOGY	84	57,907	\$171,800,700,000	14	8,820
ELECTRIC VEHICLES	164	68,010	\$39,743,035,000	11	3,940
GRID & TRANSMISSION	55	22,276	\$22,137,250,000	17	3,180
HYDROGEN	30	11,338	\$9,937,610,000	8	5,302
SOLAR	161	79,969	\$40,686,020,000	9	990
WIND	53	13,014	\$11,196,100,000	13	20,140

NEW CLEAN ENERGY JOBS AT RISK BY STATE

States in every region of the country have benefited from the provisions of the national clean energy investments. Even [climate skeptics in Congress have touted the benefits of the law](#) and have celebrated clean energy project announcements in their districts. Many also [increasingly recognize](#) that increasing energy demand in America will require major increases in supply to prevent escalating energy costs for consumers, which cannot be met without major increases in clean energy supply. And yet, despite letters from 21 House Republicans and four Senate Republicans advocating for the protection of clean energy manufacturing investments, as well as broad support from Republican governors and business leaders, Donald Trump and Republican leadership in Congress continue to push for their repeal.

10 STATES WITH THE MOST NEW CLEAN ENERGY JOBS AT RISK			
STATE	# OF PROJECTS	NEW JOBS AT RISK	NEW INVESTMENTS AT RISK
GEORGIA	48	41,738	\$27,968,800,000
TEXAS	66	29,451	\$14,505,900,000
NEW YORK	23	28,964	\$115,007,500,000
MICHIGAN	74	25,357	\$39,854,860,000
SOUTH CAROLINA	43	22,312	\$14,371,350,000
NEVADA	21	21,703	\$15,504,822,049
KANSAS	5	21,077	\$4,241,700,000
NEW MEXICO	10	20,342	\$3,938,110,000
NORTH CAROLINA	34	17,515	\$20,716,980,435
OHIO	35	14,668	\$10,596,315,014

Below are a few snapshots of the clean energy jobs at risk in states across the country.

ARIZONA

Since new clean energy investments were passed in 2022, America's clean energy sectors have kicked into high gear, transforming Arizona into an electric vehicle battery manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, or jeopardizing of **\$3.61 billion** in investments and **10,635 jobs** across clean energy sectors in Arizona alone.

Even more dangerously, efforts from some Congressional Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Arizona and many other states have seen since 2022. If those Republicans in Congress succeed, **\$13.34 billion** in investment and **13,533 good-paying clean energy jobs** are at risk of being lost in Arizona alone. The **33 projects** that represent these investments and jobs span six sectors – batteries, clean technology, electric vehicles, grid & transmission, hydrogen, and solar. Those investments and jobs are now at risk as some Washington Republicans advocate for repeal of the tax credits that these businesses counted on when they invested in the state:

- Arizona is an increasingly important hub for battery manufacturing. After [pausing its initial plan](#) to open a battery facility in Queen Creek, LG Energy Solutions (LGES) announced it would [invest \\$5.6 billion](#) in the gigafactory following the passage of clean energy investments. [LGES said](#) it was adjusting plans for the project in order to meet the growing demand for U.S.-made EV batteries that qualify for [clean energy tax credits](#). American Battery Factory also announced a [\\$1.2 billion investment](#) to build a lithium battery gigafactory in Tucson, which the company projects will [create 1,000 new jobs](#), and [Cirba Solutions announced](#) plans to build a new lithium-ion battery recycling facility in Eloy, citing new incentives from clean energy investments.
- Arizona ranks [second in the nation for solar energy potential](#), and the industry is ramping up in the state. Longroad Energy is building two solar projects in Maricopa County, Sun Streams 3 and Sun Streams 4. [Longroad's CEO said](#) he believes the clean energy investments will enable future developments and benefit utilities and ratepayers. The projects are also benefiting union workers, with Sun Streams 4 [employing registered operators and carpenter apprentices](#) in order to benefit from additional incentives under the clean energy investments. In December 2024, Invenergy [broke ground](#) on the Hashknife Solar Center in Navajo County, which is expected to create [450 construction jobs](#) and a dozen permanent positions and will generate enough energy to power more than [110,000 homes](#) once operational.

- Solar manufacturing has also taken off in Arizona, with New East Solar announcing plans to create 300 jobs manufacturing solar panels in Phoenix, thanks to the “catalyst” of clean energy investments. Meyer Burger first shared plans to build a solar manufacturing facility in 2021, but the plans stalled until clean energy investments were passed in August 2022, when the company confirmed plans to create 500 new solar manufacturing jobs in Goodyear to access expanded tax credits. In January 2024, Meyer Burger announced it would expand production from 1.5 to 2 gigawatts at the facility, and the company would hire 130 more workers to meet the growing demand for U.S.-manufactured solar panels.
- Rep. Juan Ciscomani represents Arizona’s 6th Congressional District, where five new clean energy projects are expected to invest \$557 million and create 245 jobs. Before assuming office, Rep. Ciscomani stated he opposed the landmark bill, incorrectly claiming it would raise taxes without helping inflation. This year, Rep. Ciscomani joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

COZYHOME EXPANSION	FLAGSTAFF	THREATENED	-	-

CALIFORNIA

California has among the most clean energy projects at risk, with **46** new clean energy projects announced in the state since August 2022. These new clean energy projects have already spurred nearly **\$25.7 billion** in investment and helped create or move forward **9,591** good-paying clean energy jobs in the state. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, and threatening of **\$5.46 billion** in investments and **1,311 jobs** across clean energy sectors in California alone. A few highlights in California:

- California is quickly becoming a hub for battery manufacturing. In October 2024, Sparkz opened the first domestic [lithium-ion cathode manufacturing facility](#) in Sacramento, which is set to [employ 500](#) by the end of 2025. Statevolt is another major player in California's emerging battery economy, with the company planning to construct a [\\$4 billion, 54 GWh lithium-ion manufacturing plant in Southern California](#) to produce EV batteries. Statevolt's CEO called clean energy investments a [“game-changer for the U.S. energy transition value chain,”](#) and the company is prioritizing a “hyperlocal” business model that seeks to create [good-paying jobs](#) in California's Imperial Valley.
- California is also taking the lead in integrating innovative battery storage technologies into its electric grid. Pacific Gas & Electric Company (PG&E) received a [\\$15 billion loan](#) from the U.S. Department of Energy under the [clean energy investments](#) to expand battery storage and hydropower generation. The loan will allow PG&E to upgrade its infrastructure without raising rates for its customers. Nostromo Energy received a conditional \$305.54 million loan commitment from the U.S. Department of Energy to fund [Project IceBrick](#), a network of 193 cold thermal energy storage installations at commercial buildings across California. The project expects to create [200 jobs](#) and help avoid [500,000 tons of carbon dioxide emissions](#).
- California is fast becoming a hub for solar generation and manufacturing, with eleven new projects announced in the state since the passage of clean energy investments. In March 2023, [Solar4America announced plans](#) to add 400 new jobs at its Sacramento manufacturing plant to meet increasing demand. [Caelux](#) and [SPI Energy](#) had previously shared plans to increase solar manufacturing in the state.

GEORGIA

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Georgia into a solar and EV battery manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation of **\$3.27 billion** in investments and the loss of **1,528 jobs** across clean energy sectors in Georgia alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Georgia and many other states have seen since 2022. If those Republicans in Congress succeed, **\$27.97 billion** in investment and **41,738** good-paying clean energy jobs are at risk of being killed in Georgia alone. The **48** projects that represent these investments and jobs span five sectors – batteries, clean technology, electric vehicles, grid & transmission, and solar. Those investments and jobs are now at risk as some Washington Republicans advocate for repeal of the tax credits that these businesses counted on when they invested in the state.

- Hyundai is leading investment in Georgia's EV sector. The company is investing significantly in two gigafactories to build Hyundai and Kia EVs. The two sites, [a \\$4 to \\$5 billion factory with SK On](#) near Atlanta and [a \\$4.3 billion plant](#) with LGES in Savannah, are set to create 6,500 jobs. In August 2023, Hyundai and LGES announced they would invest [an additional \\$2 billion](#) in the Savannah facility to keep pace with record EV sales, adding 400 jobs. Hyundai's gigafactories are driving a cycle of investment in Georgia, as suppliers such as [Seoyon](#), [DooWon](#), and [Joon Georgia](#) have all announced plans to open manufacturing facilities in the state, creating thousands of jobs.
- Other EV manufacturers are expanding their plans in Georgia. Rivian will manufacture its EVs in the state after receiving a [\\$6.57 billion conditional loan commitment](#) from the U.S. Department of Energy to support its planned manufacturing facility in Social Circle, which is expected to create [7,500 manufacturing jobs](#) by 2030, producing up to 400,000 EVs. Blue Bird Bus received an [\\$80 million grant](#), funded by [clean energy](#) investments, to convert a prior manufacturing site for diesel-powered motorhomes to an [electric school bus manufacturing facility](#). The new facility is expected to create [400 new, good-paying jobs](#) represented by the [United Steelworkers union](#).

- Georgia’s solar manufacturing industry is booming. Following a [November 2022 statement](#) on how clean energy investments would increase hiring, [QCells announced](#) it would more than double its Georgia manufacturing facilities. The expansion will create over 2,500 new jobs in the state, where the company has invested over \$2.5 billion. Suniva also announced an expansion of its solar cell manufacturing facility, [adding 240 new jobs](#) at its Norcross factory, and SOLARCYCLE announced a \$334 million investment to manufacture solar glass in Cedartown, [creating 600 new jobs](#) that will use materials from retired panels to make new solar glass. In October 2024, SOLARCYCLE announced more plans to open a [solar panel recycling facility](#) in the city, which is projected to create an additional [640 jobs](#), recycling [2 million solar panels per year](#).
- Rep. Earl “Buddy” Carter represents Georgia’s 1st Congressional district, which has attracted nine new clean energy projects, generating 7,300 new jobs and more than \$7.8 billion in investments. GA-1 ranks as the Congressional District with the fifth most projects in the nation and ninth for the largest investment. Despite [voting against](#) clean energy investments and [claiming the landmark bill](#) was “a bad deal for Georgia and threatens key economic investments that employ thousands of Georgians,” Carter [welcomed](#) Hyundai’s EV investment, saying he was “excited” and that the plan would “diversify and expand our economy while providing strong job opportunities for Georgians today and for generations to come.” This year, Rep. Carter joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

CLEAN ENERGY PROJECTS IN GEORGIA LOST OR THREATENED SINCE TRUMP TOOK OFFICE				
\$3.27 B			1,528

IOWA

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Iowa's wind sector. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, threatening major home energy efficiency projects in the state.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Iowa and many other states have seen since 2022. If those Republicans in Congress succeed, **1,102** good-paying clean energy jobs are at risk of being killed in Iowa alone. The five projects that represent these jobs and investments are in Iowa's wind sector. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- In November 2022, TPI Composites announced it would reopen its Iowa wind turbine blade manufacturing plant. Bill Siwek, TPI's President and CEO, [said the project](#) was possible partly due to the support provided by the Inflation Reduction Act.
- Rep. Mariannette Miller-Meeks represents Iowa's 1st Congressional District, where five new clean energy projects are expected to create 1,102 new jobs. Rep. Miller-Meeks [voted against](#) clean energy investments. In April 2025, Lafayette Lofts, a 199-year-old building being converted to affordable housing units, was at risk of [losing its loan](#) from the U.S. EPA's Greenhouse Gas Reduction Fund because of the Trump administration's attacks on the program. This year, Rep. Miller-Meeks joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

MICHIGAN

Since new clean energy investments were passed in 2022, America's clean energy sectors have kicked into high gear, transforming Michigan into a solar and electric vehicle battery manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay or threatening of **\$14.2 billion** in investments and **2,667 jobs** across clean energy sectors in Michigan alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Michigan and many other states have seen since 2022. If those Republicans in Congress succeed, **\$39.85 billion** in investment and **25,357** good-paying clean energy jobs are at risk of being killed in Michigan alone. The **74** projects that represent these investments and jobs span six sectors – solar, electric vehicles, batteries, hydrogen, grid and transmission, and other clean technologies. Those investments and jobs are now at risk as some Washington Republicans advocate for repeal of the tax credits that these businesses counted on when they invested in the state.

- Michigan's battery manufacturing industry has been booming. In October 2022, Michigan-based Our Next Energy (ONE) [announced it would invest](#) \$1.6 billion to establish a battery cell manufacturing plant in Van Buren Township. ONE's founder [called the clean energy investments](#) an “enormous gift” for the future of EVs. In September 2024, Cabot Corporation received a grant from the U.S. Department of Energy to open a [manufacturing plant](#) for EV battery-grade carbon nanotubes and conductive additives, which was expected to support [85 jobs](#). In September 2023, Fortescue Metals announced it would open a [marine battery pack manufacturing facility](#) in Detroit, with plans to create [600 jobs](#). When announcing the new facility, Fortescue's CEO said the clean energy investments made the U.S. the “[most attractive place in the world](#)” for new investments in green manufacturing.
- Michigan is a growing hub for EV manufacturing. In July 2024, General Motors received a \$500 million [clean energy](#) grant to retool its [Lansing Grand River plant](#) for EV assembly, [retaining 650 union workers](#) at the facility. [Magna announced a \\$526 million investment](#) across several expansion projects in October 2022, furthering Michigan's status as the “home of the auto industry,” according to Governor Gretchen Whitmer. In March 2023, Magna announced an additional \$100 million investment to open a new seating plant to supply General Motors' EVs in Auburn Hills. The facility is expected to create [500 new jobs](#), represented by the [United Auto Workers](#).

- EVs aren't the only clean energy industry in the Mitten State seeing massive investment. In February 2024, Corning announced it would open a solar component manufacturing facility in Richland Township, [creating 1,151 new jobs](#) paying an average of \$28 per hour, 30% higher than the region's median hourly wage. In May 2023, Polar Racking [directly cited](#) the clean energy investments for the company's decision to [open a new manufacturing facility](#) in Michigan to produce solar mounting solutions.
- Michigan's 10th Congressional District, represented by John James, has attracted two new clean energy projects, generating 275 new jobs and over \$16 million in investments, including [supplying battery tray components](#) for electric vehicles, bringing more than 155 jobs to Michigan's 10th district. Rep. James opposed clean energy investments and [argued that the legislation](#) cedes American auto leadership to China. This year, Rep. James joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

NEVADA

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Nevada into a solar and battery manufacturing powerhouse. But since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to **\$2 billion** in investments and **5,000 jobs** being threatened across clean energy sectors in Nevada alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Nevada and many other states have seen since 2022. If those Republicans in Congress succeed, **\$15.5 billion** in investment and **21,703** good-paying clean energy jobs are at risk of being killed in Nevada alone. The **20** projects representing those investments and jobs span five sectors – solar, electric vehicles, clean technologies, batteries, and grid and transmission. Those investments and jobs are now at risk as some Washington Republicans advocate for repeal of the tax credits that these businesses counted on when they invested in the state.

- Nevada is a hub for battery materials manufacturing. In February 2023, Redwood Materials received a **\$2 billion loan commitment** from the U.S. Department of Energy to build and expand **its \$3.5 billion** battery materials recycling campus in McCarran. However, this conditional loan commitment is now **under threat** because of Trump's attacks on federal climate and clean energy spending. If completed, the project is expected to create 3,400 good-paying union construction jobs and employ approximately 1,600 full-time workers, including labor, technical staff, and on-site management. In addition, Redwood Materials **will rely on** a construction workforce comprised of union, minority, and/or women-owned business enterprises. Other battery material companies are also investing in Nevada. Lilac Solutions received a **\$50 million Bipartisan Infrastructure Law funded grant** to expand the use of its lithium extraction technology in Fernley, creating **250 new jobs**, and Graphjet Technology announced plans to build an **artificial graphite production facility** in the state, which is expected to create **500 new jobs** and produce enough graphite for more than **100,000 EV batteries per year**.
- Battery manufacturers are also expanding in Nevada. In October 2024, Lyten announced plans to open a **lithium-sulfur gigafactory** in Reno, which was expected to employ **over 1,000 workers**. Lyten also planned to partner with local universities, community colleges, and Nevada Native American and Tribal members to **train workers** for the factory.

- Solar manufacturing is also growing in Nevada. In August 2023, Unimacts announced it had hired **80 new employees** at its Las Vegas manufacturing facility, which produces components to enable solar panel rotation. Unimacts' CEO said the company would not have made the expansion without clean energy investments. In January 2024, Unimacts announced **another expansion** in Nevada, sharing plans to open a **new manufacturing facility** with Nextracker in Sloan to produce torque tubes for solar panels. The new factory, which **opened** in June 2024, is expected to **create 200 new jobs**.
- GOP Rep. Mark Amodei represents Nevada's 2nd Congressional District, which has attracted eight new clean energy projects, generating an expected 15,010 new jobs and more than an expected \$11.1 billion in investment. NV-02 has the third-most number of clean energy jobs and the sixth-highest investment in the nation. Rep. Amodei **voted against** clean energy investments and **criticized** the legislation because its benefits "don't outweigh the negative stuff." This year, Rep. Amodei joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

NEW JERSEY

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, solidifying New Jersey as a clean energy hub. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, or threatening of **\$2.69 billion** in investments and **7,700 jobs** across clean energy sectors in New Jersey alone.

Now, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom New Jersey and many other states have seen since 2022. If those Republicans in Congress succeed, **\$1.79 billion** in investment and **230** good-paying clean energy jobs are at risk of being killed in New Jersey alone. The **three** new clean energy projects that represent these investments and jobs span three sectors — batteries, grid and transmission, and wind. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- Wind energy is taking off in New Jersey, with the New Jersey Board of Public Utilities [selecting the Larrabee Tri-Collector Solution](#) to connect offshore wind to the state's electricity grid.
- Rep. Thomas Kean Jr. represents New Jersey's 7th Congressional District. This year, Rep. Kean [joined](#) 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their states.

NEW YORK

New York is becoming a key hub for offshore wind and battery manufacturing, and Trump's attacks have already been brutal. In just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, or threatening of **\$5.52 billion** in investments and **5,805 jobs** across clean energy sectors in New York alone. On April 14, 2025, Trump's Interior Secretary Doug Burgum [halted construction of Empire Wind](#), a permitted and fully approved critical offshore wind project under construction to power New York State, ripping away 1,000 jobs and sending a message to businesses that their investments are not safe. Even more remains at risk: new clean energy projects have already spurred nearly **\$115.47 billion** in investment and helped create or move forward **28,979** good-paying clean energy jobs in the state. A few highlights in New York:

- New York is becoming a hub for clean energy manufacturing. In May 2023, GE [announced a \\$50 million investment](#) at its Schenectady wind manufacturing facility, creating 200 jobs. The facility produced its [first turbine](#) in November 2023, and when announcing the project, [GE said the clean energy investments](#) played an “important role” by “revitalizing the market, increasing demand for renewable energy, and enabling energy security and competitiveness.” Other offshore wind suppliers are also taking up shop in Schenectady, with both [Energy Hardware](#) and [Juniper Bach](#) announcing plans to open wind turbine component manufacturing facilities in the county. Solar manufacturers are also investing in New York, with Mitrex announcing plans for a [\\$342.9 million](#) solar panel manufacturing facility in Rochester that is expected to create [250 jobs](#).
- New York also has a booming battery manufacturing industry that is at risk. In January 2023, [Zinc8 Energy Solutions announced a \\$68 million investment plan](#) to relocate its battery manufacturing facility and U.S. headquarters to the mid-Hudson region. General Motors also announced [a \\$68 million investment to upgrade its Rochester plant](#) for EV battery components, and [Electrovaya announced a \\$75 million investment](#) to open a gigafactory in Chautauqua County, which was expected to create 250 jobs.
- The Empire State is also seeing new jobs in heat pump manufacturing, with Energy Catalyst's [plans to expand](#) its manufacturing operations in Watervliet, creating [50 new jobs](#).

NORTH CAROLINA

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming North Carolina into an electric vehicle battery hub. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the delay of **\$275 million** in investments and the loss of **200 jobs** across clean energy sectors in North Carolina alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom North Carolina and many other states have seen since 2022. If those Republicans in Congress succeed, **\$20.72 billion** in investment and **17,515** good-paying clean energy jobs are at risk of being killed in North Carolina alone. The **34** projects representing these investments and jobs span five sectors — batteries, clean technologies, electric vehicles, solar, and grid and transmission. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- EV manufacturing continues to grow in the Tar Heel State. Toyota [invested \\$13.9 billion](#) in its Liberty EV battery manufacturing facility, which [starts production in April 2025](#). The investment is more than 10 times more than what the company initially planned, with over \$10 billion in new funding announced since clean energy investments were passed. EV charging manufacturers are also flocking to the state. In February 2023, Kempower credited [clean energy investments](#) for the company's decision to build a \$41 million EV charging station manufacturing facility in Durham. In May 2023, EV charger manufacturer [Alpitronic announced plans](#) for a \$9.3 million tech and repair facility and headquarters in Charlotte, [creating an expected 300 new jobs](#) with an average salary of over \$90,000. Atom Power announced two expansions at its EV chargers manufacturing facility in Huntersville since clean energy investments were passed, [investing a total of \\$154 million](#) and [creating an expected 375 new jobs](#) with an average salary of \$92,000.
- North Carolina is also becoming a hub for transmission manufacturing. In October 2024, MetOx was selected to receive an \$80 million grant from the U.S. Department of Energy for [Project Arch](#), which will manufacture advanced transmission cable in Chatham County, expecting to support [over 300 jobs](#). Siemens Energy also announced a [\\$149.8 million investment to build large power transformers](#) in February 2024, creating an expected [475 manufacturing jobs](#) in Mecklenburg County and [84 new jobs](#) in Raleigh.

→ Battery manufacturing is growing across the Tar Heel State. In August 2024, Natron Energy announced plans to build a [sodium-ion battery factory](#) in Edgecombe County to supply batteries for [EV fast chargers and microgrids](#). The project is expected to create [1,000 new jobs](#) and grow North Carolina's economy by [\\$3.4 billion](#) over 12 years. Dai Nippon also announced a \$233 million investment to build lithium-ion battery pouches in Linwood, [creating an expected 352 jobs](#) with an average annual salary higher than the county average. Forge Nano planned to invest \$165 million in Wake County, creating [204 battery manufacturing jobs](#) in Wake County, and Celgate announced an [expansion of its manufacturing site](#) in Charlotte, adding an expected 100 new jobs manufacturing battery separators.

OHIO

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Ohio into a clean energy manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already threatened the loss of **\$500 million** in investment and **1,300 jobs** across clean energy sectors in Ohio alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Ohio and many other states have seen since 2022. If those Republicans in Congress succeed, **\$10.6 billion** in investment and **14,668** good-paying clean energy jobs are at risk of being killed in Ohio alone. The **35** new clean energy projects that represent these investments and jobs span six sectors — electric vehicles, batteries, solar, wind, grid and transmission, and clean technologies. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- Ohio's EV economy continues to grow thanks to clean energy investments. [Honda and LG Energy Solutions announced a \\$4.4 billion investment](#) in an EV battery plant project in Fayette County, the largest direct private investment in Ohio's history, creating 2,200 jobs. In February 2024, Schaeffler announced it would open a new facility in Dover that was expected to [create 650 jobs](#) manufacturing electric car axles. Schaeffler expects the facility to benefit from federal clean energy incentives. In July 2024, Mobis North America received a \$32.6 million grant, [funded by clean energy investments](#), to convert its Toledo manufacturing facilities to produce [plug-in hybrid vehicles](#). Mobis planned to use part of the funding to construct a new battery system assembly plant in Toledo, and the company [pledged to work](#) with local educational institutions and the United Auto Workers (UAW) Local 12 to create worker training pipelines.
- Ohio is also seeing massive new investments in solar manufacturing. In March 2023, [Invenenergy announced a \\$600 million investment](#) to build one of the largest solar power manufacturing facilities in the U.S. in Pataskala, creating 850 good-paying jobs and further establishing Ohio as a solar manufacturing hub. And, in August 2022, First Solar announced plans to expand its manufacturing facilities in the state, which was expected to create at least [100 new manufacturing jobs](#). In a statement, [First Solar's CEO said clean energy investments](#) "entrusted [the clean energy industry] with the responsibility of enabling America's clean energy future, and we must meet the moment."

→ Rep. David Joyce represents Ohio’s 14th Congressional District, where two new clean energy projects are expected to invest \$605 million and create 160 jobs. Despite [voting against](#) the clean energy investments and claiming they would [make his constituents’ lives worse](#), Joyce [praised](#) a \$170 million EV investment in his district for helping “restore the legacy of the American worker.” This year, Rep. Joyce joined 20 other House Republicans in a letter urging House Leaders to protect the clean energy investments because of the jobs and projects they were driving to their districts.

PENNSYLVANIA

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Pennsylvania into a clean energy powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation of **\$182.6 million** in investments and the loss of **901 jobs** across clean energy sectors in Pennsylvania alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Pennsylvania and many other states have seen since 2022. If those Republicans in Congress succeed, **\$1.34 billion** in investment and **4,962** good-paying clean energy jobs are at risk of being killed in Pennsylvania alone. The **20** projects that represent these jobs and investments span seven sectors — solar, wind, hydrogen, batteries, electric vehicles, grid and transmission, and other clean technologies. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- Battery manufacturing is growing exponentially in Pennsylvania thanks to new investments. In August 2023, **Eos Energy Enterprises** announced Project American Made Zinc Energy (Project AMAZE), a **\$500 million investment** to expand its Turtle Creek battery manufacturing facility. Eos said the expansion, which was expected to create **650 full-time jobs** and **50 union construction jobs**, was part of its strategy “to address increased long-duration energy storage demand driven by the Inflation Reduction Act.” In October 2023, **Westinghouse** announced it would **invest at least \$18 million** to open a facility to support the development of the company's transportable energy battery technology in Etna. The company's eVinci Microreactor Development Facility in Allegheny County is expected to create **40 high-paying jobs**.
- EV manufacturing is also expanding in Pennsylvania. In July 2024, **Harley-Davidson** received a **\$89 million grant** from clean energy investments to help convert its York facility to manufacture electric motorcycles. The funding allowed the company to retain over 1,300 union jobs and add over 125 new positions at the facility.

→ Pennsylvania is becoming a central producer of critical transmission technologies. In October 2024, **Mainspring Energy** was selected to enter negotiations for an **\$87 million grant award** from the U.S. Department of Energy to establish a manufacturing facility in Findlay Township where it would **manufacture linear generators** to help make the electricity sector carbon-free. The facility was expected to support 300 construction jobs and **600 manufacturing jobs**, in addition to 20 apprenticeships. In September 2024, **Hitachi Energy** announced that it would expand its high-voltage switchgear and breakers **manufacturing facility** in Mount Pleasant, which was expected to create **100 new jobs**. In April 2023, **Prysmian** announced a **\$22.5 million investment** to expand transmission conductor technology manufacturing in Williamsport after signing a supply agreement with Invenergy Transmission, which said clean energy investments provide a “**stable policy landscape**” for sustainable energy solutions.

SOUTH CAROLINA

South Carolina is also among the states with the most to lose if clean energy investments are gutted, with **39** new projects announced in the state since August 2022. In just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, or threatening of **\$1.76 billion** in investments and **1,520 jobs** across clean energy sectors in South Carolina alone. In a state that has been devastated by textile mill closures, these new clean energy projects have already spurred **\$15.32 billion** in investment and helped create or move forward **21,786** good-paying clean energy jobs in the state. A few highlights in South Carolina:

- South Carolina's EV economy is at risk. In October 2022, BMW announced a **\$1 billion investment** in its Spartanburg campus to retool the factory for EV production and an additional **\$700 million investment** to produce EV batteries at a new factory in Woodruff. In 2023, Volvo announced it planned to add **1,300 jobs at its Ridgeville factory** to build its fully electric SUV, and Volkswagen AG announced a \$2 billion investment to manufacture **Scout-branded EVs** in Blythewood, which was expected to create 4,000 new jobs. ABB E-Mobility called the clean energy investments a “**transformational investment**” in transportation electrification when announcing an expansion of its Columbia EV charger factory, which was expected to create 100 new jobs.
- Battery recycling companies are driving new investment in South Carolina, with Redwood Materials announcing a **\$3.5 billion investment** to build a battery materials campus in Ridgeville in December 2022, which was expected to create 1,500 new jobs. Redwood said the federal clean energy investments enabled it to invest at home and set the stage for the U.S. to become a “**global leader**” in **battery manufacturing**. In September 2024, American Battery Technology Company announced plans to open a battery recycling facility in South Carolina, thanks to a grant **funded by the clean energy investments**. The facility was expected to create **300 jobs** and recycle **100,000 tons of battery material** per year.
- Battery manufacturers are also setting up shop in South Carolina. Envision AESC has drastically scaled its plans to manufacture batteries in South Carolina, with plans to invest **over \$1.6 billion** in a battery manufacturing facility that is expected to create **2,450 jobs**, nearly **quadrupling** the company's initial plan to invest \$810 million in the factory. In February 2024, EnerSys announced a **\$500 million investment** to open a lithium-ion cell gigafactory in Greenville, which was expected to create **500 new jobs**. EnerSys was selected to enter into **award negotiations** with the U.S. Department of Energy for an award funded by the clean energy investments in September 2024.

CLEAN ENERGY PROJECTS IN SOUTH CAROLINA LOST OR THREATENED SINCE TRUMP TOOK OFFICE

PROJECT	LOCATION	STATUS	INVESTMENT	JOBS
BOSCH ELECTRIC MOTOR MANUFACTURING FACILITY	CHARLESTON	DELAYED	\$260 MILLION	350 JOBS
ENVISION AESC GIGAFACTORY MARCH 2024 EXPANSION	FLORENCE COUNTY	CANCELLED	\$1.5 BILLION	1,600 JOBS
PROTERRA EV BATTERY MANUFACTURING LAYOFF	GREER	CANCELLED	-	90 JOBS

TEXAS

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Texas into a solar and EV manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs have already taken their toll, leading to the cancellation, delay, or threatening of **\$4 billion** in investments and **1,673 jobs** across clean energy sectors in Texas alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Texas and many other states have seen since 2022. If those Republicans in Congress succeed, **\$14.51 billion** in investment and **29,451** good-paying clean energy jobs are at risk of being killed in Texas alone. The **66** new clean energy projects that represent these investments and jobs span seven sectors, including batteries, clean technologies, electric vehicles, grid and transmission, hydrogen, solar, and wind. Those investments and jobs are now at risk as some Washington Republicans advocate for a repeal of the tax credits that these businesses counted on when they invested in the state.

- Solar manufacturing is booming in Texas. In November 2024, the Aspen Woods Group and Robert Rockefeller Standard Carbon announced plans to open a [solar manufacturing facility](#) in Stratford, which is expected to create [over 700 jobs](#). Waarree also announced it would invest \$1 billion to open a solar manufacturing facility near Houston, [creating 1,500 new jobs](#), and in September 2023, Sirius PV announced a [\\$35 million investment](#) to open a solar manufacturing facility in Waller County, [creating 450 new jobs](#). To meet the growing demand for [U.S.-manufactured solar panels](#) driven by clean energy investments, PV Hardware announced it would open a 6GW solar factory in Texas. Additionally, SEG Solar announced a new residential solar project that will [bring 500 jobs to the state](#), with more on the way as the company uses [savings from clean energy tax credits](#) to fund more manufacturing and support jobs.
- Companies are expanding their manufacturing of critical grid components in Texas. In April 2024, Eaton received two tax credits to expand its facilities in [El Paso and Nacogdoches](#), where it manufactures electric breakers and voltage regulators. Thanks to the tax credits, Eaton expected to add [600 new jobs in El Paso](#) and [200 new jobs in Nacogdoches](#).
- Texas is also becoming a hub for wind energy manufacturing. In November 2023, Carter Wind Turbines announced it would open a new manufacturing facility in Vernon, creating [300 new jobs](#). Diligence Offshore Services is also investing \$1.23 billion to open an offshore wind support and manufacturing facility off the coast of Port Arthur, creating [4,000 construction jobs and 150 permanent jobs](#).

WISCONSIN

Since new clean energy investments were passed in 2022, America's clean energy sector has kicked into high gear, transforming Wisconsin into a solar and battery manufacturing powerhouse. But in just the first few months since Trump's election, attacks on clean energy and the uncertainty of tariffs are threatening **\$2.5 billion** in investments across clean energy sectors in Wisconsin alone.

Even more dangerously, efforts from some Washington Republicans to repeal tax credits for clean energy manufacturing could completely decimate the manufacturing boom Wisconsin and many other states have seen since 2022. If those Republicans in Congress succeed, **\$5.44 billion** in investment and **2,732** good-paying clean energy jobs are at risk of being killed in Wisconsin alone. The **15** projects that represent these investments and jobs span six sectors — solar, batteries, wind, electric vehicles, grid and transmission, and other clean technologies.

- Wisconsin is becoming a hub for clean energy generation. In December 2024, Wisconsin Electric Power Company received a **\$2.5 billion conditional loan commitment** from the U.S. Department of Energy to finance the addition of **over 1,650 megawatts** of utility-scale renewable power generation and energy storage in Wisconsin without raising electricity costs. The loan commitment was offered under a new program **created by clean energy investments**. However, this conditional loan commitment is now **under threat** because of Trump's attacks on federal climate and clean energy spending. Also in December 2024, the **Public Service Commission of Wisconsin** approved the Vista Sands Solar project in Portage County, which was projected to support **over 500 construction jobs** and generate **\$6.5 million per year in tax revenue** to the county and the towns of Grant and Plover. The project was expected to generate enough electricity for **over 200,000 Wisconsin homes** and offset more than **1.6 million metric tons of carbon dioxide emissions** in its first year of operations.
- EV manufacturing in Wisconsin has grown significantly since the passage of the clean energy investments. In April 2023, ABB announced a **\$100 million investment** to build electric drive units for EVs in New Berlin, creating 100 new jobs. When making the announcement, **the company cited** increased confidence in the U.S. market driven by clean energy investments. In May 2023, Ingeteam also announced it would add **100 new positions** to its Milwaukee EV charger manufacturing facility, bringing more **good-paying jobs** to the region.
- Solar manufacturing companies are also increasing their investment in Wisconsin. In August 2023, Siemens announced it would open a **solar component manufacturing facility** in Kenosha, creating over a dozen jobs to meet the growing demand **driven by clean energy investments**.

NEW CLEAN ENERGY JOBS AT RISK IN HOUSE REPUBLICAN DISTRICTS

MORE THAN HALF OF NEW CLEAN ENERGY PROJECTS AND JOBS ARE LOCATED
IN DISTRICTS REPRESENTED BY HOUSE REPUBLICANS

More than half of the clean energy projects that have been announced or moved forward thanks to clean energy investments are located in districts represented by House Republicans. In many cases, they represent transformative investments that will provide thousands of good-paying jobs and serve as backbones of the local economies for years or decades to come. These investments were often made on the explicit premise of the 10-year stability embedded in the tax incentives passed in 2022. If those incentives are repealed or gutted, companies will likely offshore their manufacturing, never to return.

An analysis of the **777** clean energy projects that have moved forward since the passage of the 2022 clean energy investments finds:

- More than half of all clean energy projects that have moved forward since the passage of the clean energy investments are in districts represented by House Republicans: **417** clean energy projects in total, located in **152** congressional districts across the country.
- Projects in these districts will create **210,710** jobs, a majority of the national total, and generate more than **\$199.89** billion in investments.

417 NEW CLEAN ENERGY PROJECTS IN 152 CONGRESSIONAL DISTRICTS REPRESENTED BY
HOUSE REPUBLICANS ACROSS THE COUNTRY

The district represented by a Republican member of Congress with the highest number of new clean energy jobs is **Nevada's 2nd** congressional district, represented by Rep. **Mark Amodei**, with **15,010** new clean energy jobs. The second highest number of clean energy jobs is in **Georgia's 10th** congressional district, represented by Rep. **Mike Collins**, with **9,910** jobs.

NEW JOBS IN CONGRESSIONAL DISTRICTS REPRESENTED BY REPUBLICANS				
DISTRICT	REPRESENTATIVE	# OF PROJECTS	INVESTMENT \$	# OF JOBS
NV-02	REP. MARK AMODEI	8	\$11,176,322,049	15,010
GA-10	REP. MIKE COLLINS	5	\$6,711,000,000	9,910
NC-09	REP. RICHARD HUDSON	7	\$16,988,800,000	8,388

CLEAN ENERGY JOBS AT RISK IN DISADVANTAGED COMMUNITIES

OVER \$122.8 BILLION IN CLEAN ENERGY INVESTMENT HAS SPURRED
155,183 JOBS IN DISADVANTAGED COMMUNITIES ACROSS THE U.S.

Clean energy investments have brought good-paying jobs to where they're needed the most, especially in communities left behind by disappearing factory jobs. By providing bonus tax credits to companies that [pay fair wages](#), use [registered apprenticeship programs](#), or [invest in communities](#) that have lost jobs through market losses in fossil fuel energy production, clean energy investments are creating economic opportunities in historically disadvantaged communities all across America. Of the total **777** new clean energy projects announced or advanced since August 2022, **344** projects are located in disadvantaged communities, representing **\$122.84 billion** in new investment and **155,183** new clean energy jobs.

This analysis defines “disadvantaged communities” as cities or counties where the median income, as reported in the 2020 Census, is below 200% of the federal poverty line. Our analysis includes public job and project announcements from the private sector since the passage of the clean energy investments to demonstrate the breadth and scale of the growing clean energy economy nationwide and the direct benefits for disadvantaged communities.

Specifically, this report finds:

- **38.9%** of new clean energy jobs, **27.8%** of investments, and **44.27%** of projects are located in disadvantaged communities across the United States.
- **334** projects located in disadvantaged communities across **41** states are creating **155,183** new clean energy jobs and **\$126.8 billion** in investment.
- Texas, Georgia, and Michigan are home to the highest number of jobs in disadvantaged communities.

THE 151,515 NEW CLEAN ENERGY JOBS AT RISK IN DISADVANTAGED COMMUNITIES

NEW CLEAN ENERGY JOBS IN DISADVANTAGED COMMUNITIES – TOP TEN STATES			
STATE	# OF PROJECTS	JOBS	INVESTMENT \$
TEXAS	22	18,657	\$10,444,700,000
GEORGIA	29	17,551	\$4,086,800,000
MICHIGAN	34	17,245	\$13,388,190,000

CLEAN ENERGY JOBS AT RISK IN DISADVANTAGED COMMUNITIES – BY CONGRESSIONAL DISTRICT

147 congressional districts across 41 states have new clean energy jobs in disadvantaged areas. A majority of projects (231), jobs (109,668), and investments (\$92.11 billion) in disadvantaged areas are in districts represented by Republican members of Congress.

CONGRESSIONAL DISTRICTS WITH THE LARGEST NUMBER OF JOBS IN DISADVANTAGED AREAS				
DISTRICT	REPRESENTATIVE	PARTY	# OF JOBS	INVESTMENT \$

TX-10	REP. MICHAEL MCCAUL	R	3,450	\$1,187,000,000

COMMUNITY HIGHLIGHTS

YUMA COUNTY, ARIZONA

Yuma County has the highest unemployment rate in the state of Arizona, with 10.9% of its residents unemployed as of February 2025. The county, located near the California-Arizona border, is heavily reliant on the agricultural industry, driving seasonal unemployment spikes. New clean energy investments are driving economic diversification and creating good-paying, permanent jobs in the county, where the median household income is \$56,439.

For example, EVelution Energy is [investing](#) \$200 million in a solar-powered cobalt sulfate production facility in Yuma County, the first in the U.S. Gil Michel-Garcia, EVelution Energy's co-founder, said the clean energy investments were [“critical” to accelerating the domestic battery supply chain](#). The new facility will create more than 360 jobs in the county, and EVelution Energy is [partnering with Arizona Western College](#) to provide free worker training programs for the company's employees.

NORTHWEST GEORGIA

Dalton, Georgia, once [produced 75%](#) of the world's carpets. However, the region and the carpeting industry took a [huge hit](#) during the 2009 recession, and the industry never fully bounced back. Thanks to clean energy investments, the region is becoming a hub for solar manufacturing.

Since the clean energy investments were enacted, QCells has announced multiple major investments to expand solar manufacturing in northwest Georgia. In January 2023, QCells announced it would invest more than [\\$2.5 billion](#) to expand solar cell manufacturing, including building a new facility in Cartersville and adding a third facility to its Dalton location. QCells estimated the expansions would create more than [2,500 jobs](#) in the region, paying up to [\\$30 an hour](#). Solar glass manufacturer Solarcycle announced a \$334 million investment in nearby Cedartown to support QCells' manufacturing operations, creating 600 more manufacturing jobs in the region. Solarcycle's CEO, Suvi Sharma, said the plant would [“bring hundreds of good-paying jobs to Georgia and help the industry in its goals to build fully American-made clean energy solutions.”](#)

BAY CITY, MICHIGAN

Bay City, located in Mid-Michigan, has struggled to create good-paying jobs in the past decade. The city was devastated by the auto industry's decline; the local General Motors manufacturing plant employed [only a fraction of the workers that it did](#) at its peak. Bay City's economy was also hurt by the closure of nearby coal plants. However, new clean energy investments in Bay City are now creating good-paying jobs and revitalizing the region's auto manufacturing sector while providing vital inputs for the domestic electric vehicle (EV) supply chain.

In February 2024, SK Siltron CSS received a \$544 million conditional loan commitment from the U.S. Department of Energy to expand its [silicon carbide wafer](#) manufacturing facility in Bay City. The facility, which produces silicon carbide (SiC) wafers for power electronics in EVs, is [projected to be](#) among the top five manufacturers of SiC wafers globally thanks to expanded production made possible by the DOE loan. Terry Spencer, Monitor Township Supervisor, [lauded the investment](#), saying, “We need to encourage investments like SK Siltron” to help the town keep workers.

In addition, in June 2023, Mersen USA announced a \$71 million [investment](#) to expand its Bay City manufacturing facility with [four new buildings](#), creating [70 new jobs](#). Mersens’ announcement followed a [\\$1.6 billion expansion](#) of Bay Carbon’s manufacturing facility, further demonstrating the resurgence of investments in Bay City. The facility manufactures carbide-coated graphite components, which are crucial to the [silicon chips used in EVs](#). Rep. Kristen McDonald Rivet (MI-08), who represented Bay City in the State Senate at the time, praised the investment, noting that it would create [good-paying jobs](#) for the city.

TURTLE CREEK, PENNSYLVANIA

For decades, Turtle Creek’s economy was centered around the East Pittsburgh Westinghouse factory, which [employed more than 20,000 after World War II](#). When Westinghouse moved production in the 1980s, it left Turtle Creek with [few economic opportunities](#), as demonstrated by the town’s low median income.

Clean energy investments are driving a manufacturing revitalization in the town and creating good-paying jobs. In August 2023, Eos Energy Enterprises announced [Project American Made Zinc Energy \(AMAZE\)](#), a \$500 million expansion of its Turtle Creek manufacturing facility located at the site of Westinghouse’s old campus. Eos said the project is part of its strategy “to address increased long-duration energy storage demand driven by the Inflation Reduction Act.” The expansion will create approximately [650 full-time jobs](#) and 50 union contractor construction jobs, and Eos is working with local school districts and community colleges to attract a strong local workforce. Beyond bringing new jobs to Turtle Creek, Eos is also helping develop [new STEM programs](#) for local high schools and exploring options to [stabilize Turtle Creek’s electric grid](#), further benefiting the community.

WALLER COUNTY, TEXAS

Waller County, Texas, has a higher poverty rate than the rest of the Houston area, with 13.5% of its residents living below the poverty line. Waller County's economy has been dependent on the boom and bust cycle of the oil industry, but new clean energy investments in the county are creating good-paying clean energy jobs in more stable industries. Solar energy manufacturer Waaree is making a \$1 billion investment in Waller County. The company is opening a 3 GW panel manufacturing facility to meet the growing demand for U.S.-manufactured solar panels that qualify for clean energy tax credits. The facility will create more than 1,500 clean energy jobs in the county. In June 2023, Elin Energy announced a \$35 million investment to open a solar panel manufacturing facility, creating 450 jobs in Brookshire.

CLEAN ENERGY JOBS AT RISK IN RURAL COMMUNITIES

OVER \$56.63 BILLION IN CLEAN ENERGY INVESTMENT IS SPURRING 64,943 JOBS IN RURAL COMMUNITIES ACROSS THE U.S.

Since the passage of the 2022 clean energy investments, companies have invested in new clean energy projects across the country, including in rural communities across 31 states. This analysis defines “rural communities” as counties in which at least 50% of the population lives in a rural area, per the 2020 Census. Of the total 751 new clean energy projects announced or advanced since August 2022, **138** projects are located in rural communities, representing **\$56.63 billion** in new investment and **64,943** new clean energy jobs.

This analysis includes public announcements from the private sector since the passage of the 2022 clean energy investments to demonstrate the breadth and scale of the growing clean energy economy being built nationwide and the direct benefits for rural communities. Specifically, this report finds:

- **16.28%** of new clean energy jobs and **17.76%** of projects with location data available are located in rural communities across the United States.
- **138** projects located in rural communities across **32** states are creating over **64,943** new clean energy jobs and **\$56.63** billion in investment.
- North Carolina, Texas, and South Carolina are home to the highest number of new clean energy jobs in rural communities.

THE 64,943 (AND COUNTING) NEW CLEAN ENERGY JOBS IN RURAL AMERICA

NEW CLEAN ENERGY JOBS IN RURAL COMMUNITIES – TOP 10 STATES			
STATE	# OF PROJECTS	NEW JOBS	NEW INVESTMENTS
NORTH CAROLINA	11	9,499	\$17,344,810,435
TEXAS	13	7,255	\$2,062,000,000

MICHIGAN	6	2,886	\$5,835,000,000

CLEAN ENERGY AT RISK IN RURAL COMMUNITIES – BY SECTOR

Clean energy investments are not only driving jobs and investment in solar and wind energy projects across rural America but are also turbocharging all types of clean energy technologies in these communities. The rural clean energy jobs at risk include jobs in renewable energy, electric vehicles, battery production, and projects to strengthen the electric grid — revitalizing small towns and boosting their economies. Plans include **39** new battery manufacturing sites, **19** new or expanded electric vehicle manufacturing facilities, **42** solar and wind manufacturing plants, and **18** clean technology projects.

NEW CLEAN ENERGY PROJECTS IN RURAL COMMUNITIES – BY SECTOR			
SECTOR	PROJECTS	JOB	INVESTMENT \$
BATTERIES	39	24,854	\$30,599,236,362
CLEAN TECHNOLOGY	20	5,066	\$3,733,200,000
ELECTRIC VEHICLES	20	9,728	\$8,853,100,000
GRID & TRANSMISSION	14	3,054	\$870,550,000
HYDROGEN	2	219	\$387,000,000
SOLAR	33	19,589	\$8,585,100,000
WIND	10	2,433	\$3,600,000,000

RURAL CLEAN ENERGY JOBS IN CONGRESSIONAL DISTRICTS

85 congressional districts across **33** states are home to new clean energy projects in rural areas. A majority of projects (**110**), jobs (**53,759**), and investments (**\$47.07** billion) in rural communities are represented by Republican members of Congress.

NEW CLEAN ENERGY JOBS IN RURAL COMMUNITIES – TOP 10 CONGRESSIONAL DISTRICTS				
DISTRICT	REPRESENTATIVE	PARTY	# OF JOBS	INVESTMENT \$
NC-09	REP. RICHARD HUDSON	R	8,171	\$16,886,800,000

COMMUNITY HIGHLIGHTS

PIEDMONT TRIAD, NORTH CAROLINA

During the 20th century, the Piedmont Triad's economy was [centered on furniture and textile manufacturing](#). Between 1999 and 2009, a surge in imports caused the industry to lose [more than half of its jobs](#). Clean energy investments are helping revitalize the region by providing high-quality EV manufacturing jobs.

Toyota has repeatedly expanded plans for its EV manufacturing facility in Liberty, North Carolina since the clean energy investments were passed. In August 2022, Toyota announced an [additional \\$2.5 billion investment](#), creating an additional 350 manufacturing jobs at the facility, and announced another \$8 billion investment in October 2023, supporting [a further 3,000 jobs](#). Now, the project is estimated to create [more than 5,000 jobs](#) in total that [pay an average salary of \\$62,234](#), more than 60% higher than the average annual wage in Randolph County. These new investments have put Randolph County, which is 60% rural, [“on the cusp of a lot of opportunity,”](#) according to Randolph County's Economic Development Director — demonstrating how clean energy investments are revitalizing rural communities.

WEST POINT, GEORGIA

In July 2023, Kia announced an expansion of their existing plant in West Point, Georgia, to begin manufacturing EVs in the U.S. for the first time. West Point is located in both Harris County and Troup County, which are 97% and 45% rural, respectively. The [\\$200 million investment](#) created 200 additional jobs with training at the [Kia Georgia Training Center](#). The facility already [manufactures](#) over 40% of Kia vehicles sold in the U.S., and the addition of EVs will further increase the facility's output. The facility assembled its [first EV](#) in May 2024.

Before Kia announced it would open an auto manufacturing plant in 2006, West Point was on [a downward economic slide](#) driven by losses in the textile industry. The [city's Mayor celebrated the company's investments](#), saying “By providing employment opportunities and fostering economic growth, Kia has helped to improve the livelihoods of many people in West Point.” Today, Kia is continuing to drive investment and attract other companies in the EV supply chain to the area, including a [\\$72 million Daesol Ausys facility](#) to produce EV interior components for Kia and Hyundai, which is expected to bring [165 new jobs](#) to the city.

CLEARFIELD COUNTY, PENNSYLVANIA

In March 2024, Swift Current Energy received a [\\$90 million grant](#) from the U.S. Department of Energy, funded by the Bipartisan Infrastructure Law, to construct the Mineral Basin Solar Project in Girard Township, Pennsylvania. Girard Township is located in Clearfield County, which is 61% rural, and the Mineral Basin Solar project is located on [former coal mine land](#), demonstrating how former mining communities can harness the [benefits of clean energy](#). The solar project is expected to [support 750 jobs](#) during construction, and once operational, it is expected to generate enough electricity to power [more than 70,000 homes](#).

Swift Current has committed to ensuring the local community benefits from the project, which is estimated to generate [more than \\$1.1 million in tax revenue](#) for the county, nearby townships, and the local school district. Swift Current also planned to invest [\\$20 million in economic development programs](#), including partnering with local organizations to create job training initiatives to develop the clean energy workforce of the future.

METHODOLOGY

This report analyzes public announcements from the private sector as part of the clean energy economy since new clean energy investments were enacted in 2022. It tracks public announcements from the private sector between August 16, 2022, and March 31, 2025. A full list of included projects can be found [here](#).

In this report, “disadvantaged communities” are defined as counties or Census-designated places where the median household income is less than 200% of the federal poverty line. This analysis is based on publicly available income data, (“Income in the past 12 months (in 2020 inflation-adjusted dollars”),) [downloaded](#) on December 14, 2023, and the [2020 federal poverty threshold](#) for a four-person household.

In this report, “rural communities” are defined as counties in which at least 50% of the population is located in a “rural” area, according to the 2020 Census. This analysis is based on publicly available data (“County-level 2020 Census Urban and Rural Information for the U.S., Puerto Rico, and Island Areas sorted by state and county FIPS codes,”) [downloaded](#) on September 11, 2023. The 2020 Census defines rural as all populations “not included in an urban area,” and defines urban areas as those with at least 2,000 housing units or a population of at least 5,000.

The Clean Energy Business Impacts Tracker tracks clean energy projects or companies that the press has identified as delayed, threatened, or canceled since Trump’s election (November 6, 2024) through April 21, 2025. The tracker includes projects or companies that directly cite Trump administration actions as a reason for their closure, as well as projects that are canceled, delayed, or threatened without specifically citing Trump administration actions. A full list of included projects can be found [here](#).
