

CLEAN ENERGY ECONOMY

As leaders in the entertainment industry, you can help to reframe the conversation about clean energy. We need Americans to know that clean energy is not a sacrifice. It revitalizes the economy — it brings costs down, creates jobs and makes America more competitive with the world.

Here's what we need to show:

- **Energy demand is skyrocketing, and we need clean energy to fill the gap.**
 - [AI, crypto, and data centers](#) are driving up power consumption. Without American clean energy, prices will go up. There'll be more chaos and less reliability for everybody.
- **Solar and wind power are cheaper than fossil fuels, so more clean energy will mean lower bills.**
 - The cost of solar and wind power has dropped so much that it now [costs half as much](#) as fossil fuels.
 - Clean energy could save families [\\$38 billion](#) on electricity bills over the next five years.
 - 3.4 million families have already saved more than [\\$8.4 billion](#) with clean energy and energy efficiency upgrades.
- **Clean energy is already creating good-paying jobs all over America, bringing back American manufacturing and making us more competitive with the world.**
 - Clean energy creates [good-paying manufacturing jobs](#), so people can get ahead without college degrees.
 - Clean energy is bringing back American manufacturing. Without it, many of the new jobs will [go overseas](#).
